PROFESSIONAL SUMMARY

Frontend engineer with nearly 5 years of experience building production web apps in React, Next.js and TypeScript, including remote work for a Netherlands-based company and fintech dashboards for Nigerian startups. I turn Figma designs into fast, responsive interfaces, build reusable component systems, integrate REST APIs, and ship the backend pieces a feature needs (Supabase/PostgreSQL, Paystack) using AI-assisted development. Before engineering I spent over 3 years running logistics operations, so I build with the business outcome in mind. TEDx speaker.

TECHNICAL SKILLS

Frontend	React, Next.js (App Router), TypeScript, JavaScript (ES6+), Redux and Redux Toolkit, Tailwind CSS, HTML5, CSS3 (Flexbox, Grid), Bootstrap, responsive and mobile-first design
Backend and data	Supabase (PostgreSQL, Auth, Row Level Security), REST APIs, MySQL, Google Apps Script
Integrations	Paystack payments API, Amazon Product Advertising API, Google Sheets API
Tools and workflow	Git, GitHub, Figma, Figma-to-code with Claude Code (Figma MCP), AI-assisted development, Agile
Security	Supabase RLS auditing, server-side payment verification, idempotency, studying networking fundamentals

EXPERIENCE

Software Developer, eShopAfrica Limited — Jan 2022 - Present

Part-time, Remote | International logistics company shipping from Nigeria to the USA, Canada and the UK

- Built the frontend for a virtual dollar card wallet so customers could pay overseas stores directly for import orders; the product was paused before launch after a change in government FX policy.
- Built a real-time Naira-to-Dollar conversion tool with async REST API integration, so customers could see import costs in naira instantly.
- Built the internal tools the business runs on: KPI dashboards in Google Apps Script across 6 cargo lines (UPS, DHL, Aramex, air, sea, frozen) and a self-serve contraband checker for customers.
- Designed the Supabase database for a US package-forwarding product: unique suite numbers, package tracking and an Amazon Product Advertising API catalogue.

Frontend Developer (Contract) — Sep 2023 - May 2026

Remote | Clients: Finding The Spots (Netherlands), AtlasWD, Myafrimall, SmartTeller (fintech)

- Refactored Myafrimall's full frontend codebase into reusable React components, giving faster load times and fewer UI bugs.
- Built financial services web apps and dashboards for SmartTeller in React, TypeScript and Tailwind CSS from Figma designs, and took part in code reviews.
- Refactored the Finding The Spots frontend to cut technical debt, making it easier to maintain and speeding up page loads.

- Turned Figma designs into responsive, high-performance interfaces for AtlasWD, with reusable components that sped up delivery and reduced bugs.
- Integrated third-party and internal REST APIs across clients, including authentication flows and data synchronisation.

Software Developer, Impacto Nigeria Oct 2023 - Mar 2024

Full-time, On-site, Lagos

- Built a user management interface in React with Redux state management, connected to REST APIs.
- Improved the company WordPress site's speed and SEO, set up Intercom support flows and supported deployments.

Software Developer, Fatherland Holdings Inc. Apr 2023 - Oct 2023

Full-time, On-site, Lagos

- Led frontend development of web apps and admin dashboards in React, TypeScript and Tailwind CSS, owning the codebase and release quality.
- Built reusable React components and UI patterns that cut UI inconsistencies and repeated work.
- Led code reviews and mentored junior developers.

Operations Manager, Pickmeup Service Jun 2018 - Dec 2021

Full-time, Lagos

- Ran end-to-end logistics operations (transport, warehousing, delivery), led operations teams and managed carriers, vendors and KPIs.

SELECTED PROJECTS

AFMweca Digital Wallet | Next.js, TypeScript, Tailwind CSS, Paystack

Digital wallet for canteens and outlets, with a 9-module super admin dashboard (users, roles, workflows, outlets, wallets, reconciliation, audit logs) built from Figma with Claude Code and the Figma MCP. Caught a payment flaw (wallets credited from client-side data) and designed server-side Paystack verification with idempotency.

Avalora Continents website | Next.js, TypeScript, Supabase | avaloracontinent.com

Visa eligibility checker, processing time tracker and consultation preview for a travel advisory firm. Audited Row Level Security across 10 tables and flagged an open policy on customer bookings.

EDUCATION

Full Stack Web Development, Moat Academy for Developers Jan 2022 - Apr 2022

React, JavaScript, MySQL, REST APIs; final project delivered ahead of schedule

B.Sc. (Ed.) Health Science Education, Tai Solarin University of Education (TASUED) 2011 - 2015

ADDITIONAL

TEDx Speaker | TryHackMe: Offensive Security Intro (2026) | Studying networking and web security fundamentals | Student Union Welfare Director, TASUED
